REVIEW CHECKLIST

FORMAT:
    Provide clear and concise documentation.
    Form Design:
        Form structure should reflect the structure of the object materialized.
        Forms should be formatted to reflect semantics of the data.
        Data entered should be validated in a meaningful way.

COMPREHENSIVE LIST OF FORMS AND REPORTS NEEDED: *Documentation Website MS2*
    Review the preliminary list of forms and reports.
    Revise and expand as necessary.

FORMS USING HTML and PHP: *WP Website Elements*
    Design several forms that you might use with your database. Note: *For this milestone, your forms do not need to connect to the database.* You should have at least three forms: one each for query, update, and insert. Add these to your WP folder. Link to them from the Forms page; provide a return link.

- Design a form to input criteria that could be used in a SQL statement to perform selection and/or projection.
- Design a form to input data that could be used to obtain the values necessary to change a column value of a single row or several rows of a table.
- Design a form that could be used to input the values necessary to add a row to a table.

    Demonstrate each form to the class.
    Show how your form validates input data.

PROJECT DOCUMENTATION: *Documentation Website MS2*
    Include screen shots of each form you develop.

    Include scrollable text boxes which show the code for each php script you write. Label each text box appropriately.

REVIEW EVALUATION   Due: See Milestone dropbox for due date.
                             [] On Time   [] Late

[]   Milestone acceptable as submitted.

[]   Milestone acceptable as submitted; however, it needs to be corrected and resubmitted for final approval.

[]   Milestone not acceptable as submitted because: _____

      Resubmit by date of _____ for final approval.
